Data Collection Survey & Website on Homelessness in Montreal

Website Pages

ABOVE: Home Page, FROM TOP RIGHT (clockwise): Map & Information on Citywide Resources, Data Collected from Survey, Volunteer & Donation Opportunities, & Survey Accessible to Centers,

Our Plan

Once the shelter or center is closed for the day the receptionists or volunteers will fill out a brief survey to the best of their abilities containing 6 questions. The survey is accessible through the website and each center will be given a unique ID number to fill out said survey.

The data collected from the surveys will be used to secure better funding and services for Montreal's homeless shelters as well as create compelling awareness campaigns to encourage support from the public. The survey allows room for these volunteers to communicate their needs in the open-ended 'violence in your center' and 'max capacity' questions, providing not only the incentive for them to improve the homelessness crisis, but also improve their center specifically.

Purpose

Montreal's public data contains large gaps within the homelessness sector, and throughout the COVID-19 pandemic, many have suffered from unemployment and financial crisis making this data especially crucial. Our initiative is to fill in those gaps that exist within the homelessness data in a sustainable manner through a collaboration with shelters and centers. The project will provide a well rounded image of homelessness in Montreal and allow the city to respond accordingly. Not only would this directly benefit the shelters/centers by providing them with an accurate record and opportunity to share their concerns, but the city could then use that data to understand which regions need the most attention as well as raise awareness.

Outcome

Our project would fill gaps within the city of Montreal's homelessness data in an ethical manner. It will aid the understanding of who exactly is targeted by homelessness in Montreal, what areas need the most support, and how to provide that support. The awareness campaign built around the data this program would collect will encourage the public's participation in visiting our website and hopefully solving the homelessness crisis.
