

How it works?

We plan to implement this through creating a partnership with telecommunication companies and community centres. Tyndale and Centre Sportif de la Petite Bourgogne will act as our distribution centres for the SIM cards.

Ciara, Penelope, Renee, & Tosh.
(Key partners include Tyndale, Centre Sportif de la Petite Bourgogne and Bell/TELUS)

Outcomes

The outcome is to reduce the digital divide and help immigrants access internet for school, work, keeping up with current affairs, and contacting family back home. This will also allow them to have the means to spend money on groceries and rent.

Sustainable Wi-Fi - Little Burgundy

What is it?

Little Burgundy is home to the most social housing in Canada and inhabitants are suffering from the digital divide which has been amplified by COVID-19.

The purpose of our project is to provide SIM cards to low income immigrants in Little Burgundy.

What is new and distinctive about your project?

The purpose of our project is to provide free, safe, and accessible Wi-Fi through SIM cards. Our community based approach will unite immigrants together by accessing our resource in local community centres. This will also bring awareness to other programs being offered.
